

Video Workshop

T i p s a n d T r i c k s

12 November 2024

The background of the image is a photograph of Antelope Canyon, showing smooth, undulating sandstone walls illuminated by warm, golden light from a narrow opening at the top. The light creates a play of shadows and highlights on the curved surfaces of the rock.

A picture is worth a
thousand words.

Waar moet ik opletten ?
...en waarom ?

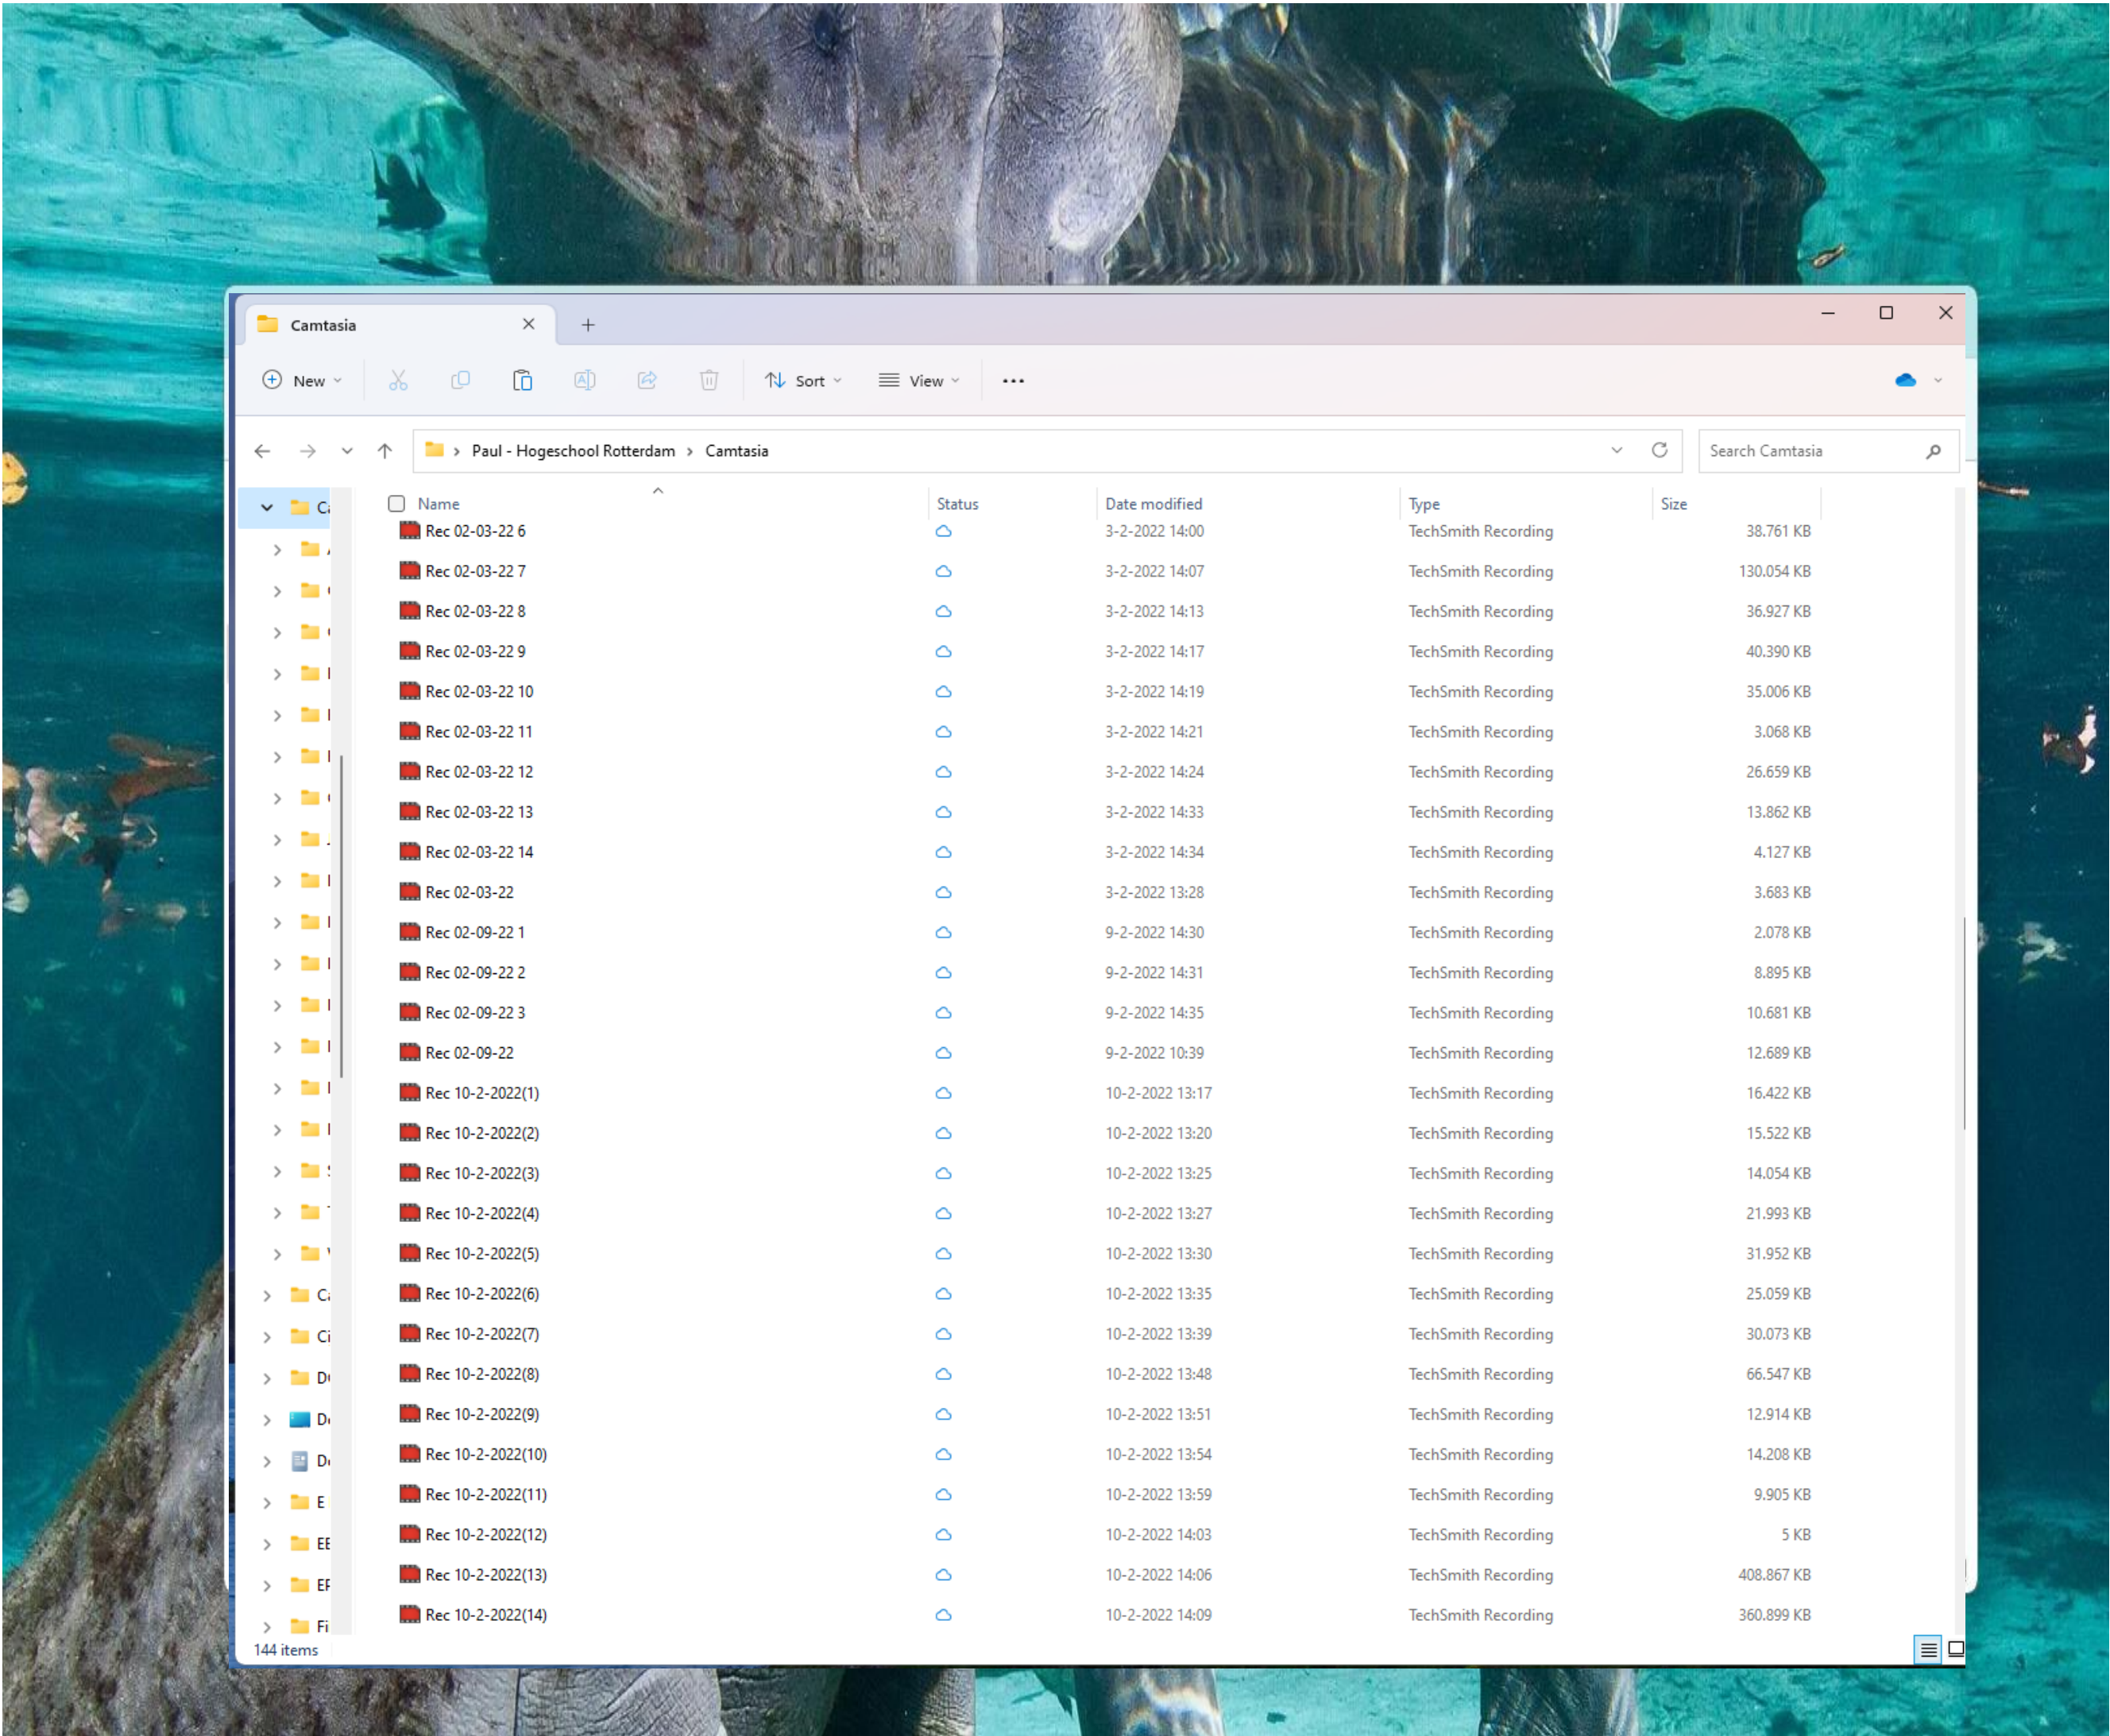

Storage and batteries

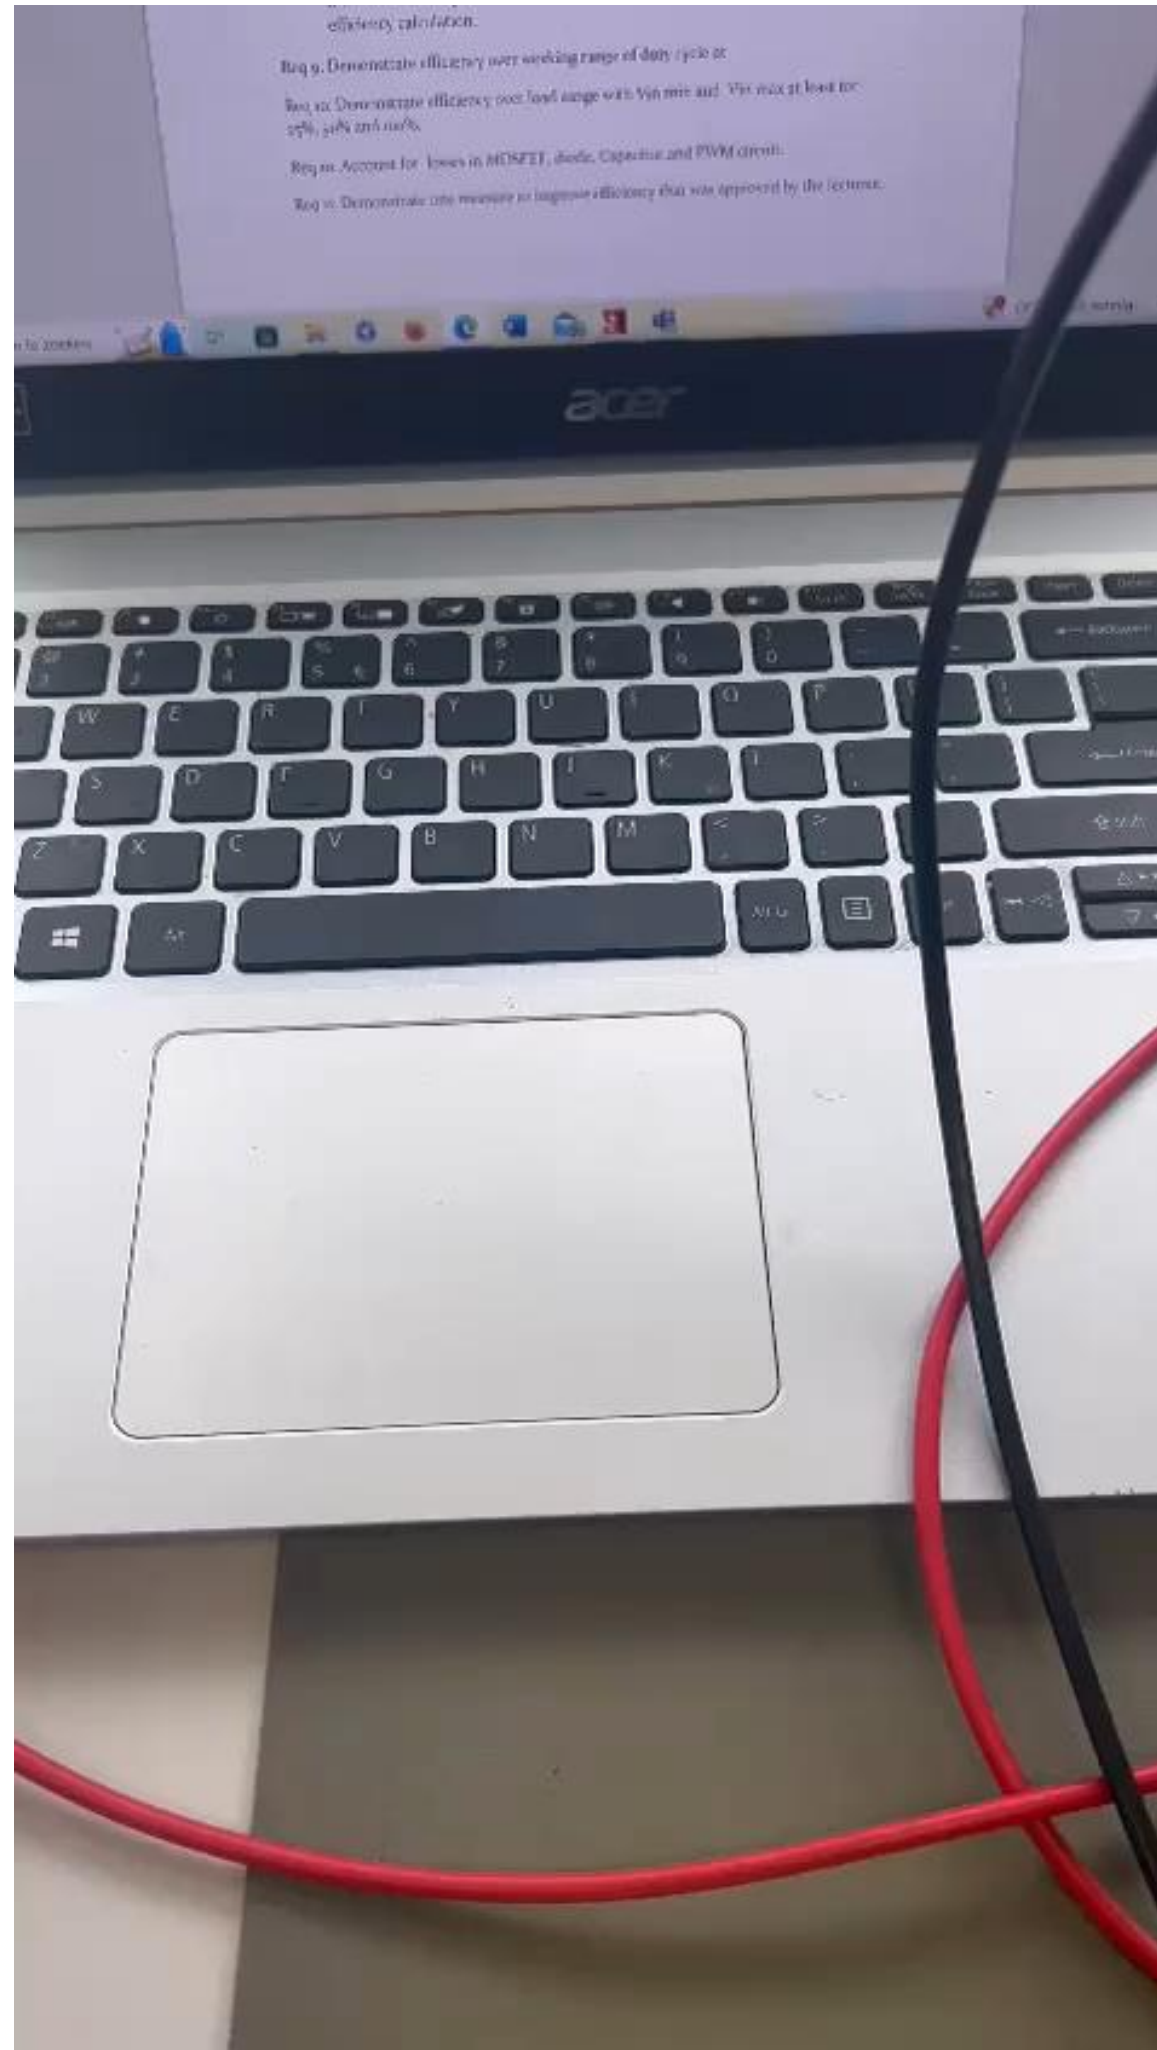

Think ahead – make sure you won't run out of space or juice. Standard filming uses about 150mb/minute, so make sure to have enough space and maybe delete some junk from your phone beforehand. Avoid filming in 4k, as it's not really worth the additional space consumption.

For battery, make sure to start with a good charge, but you probably also want to get yourself a battery pack or similar so that you can keep charging while you are out and about.

Handig om naming convention te gebruiken voor je zelf

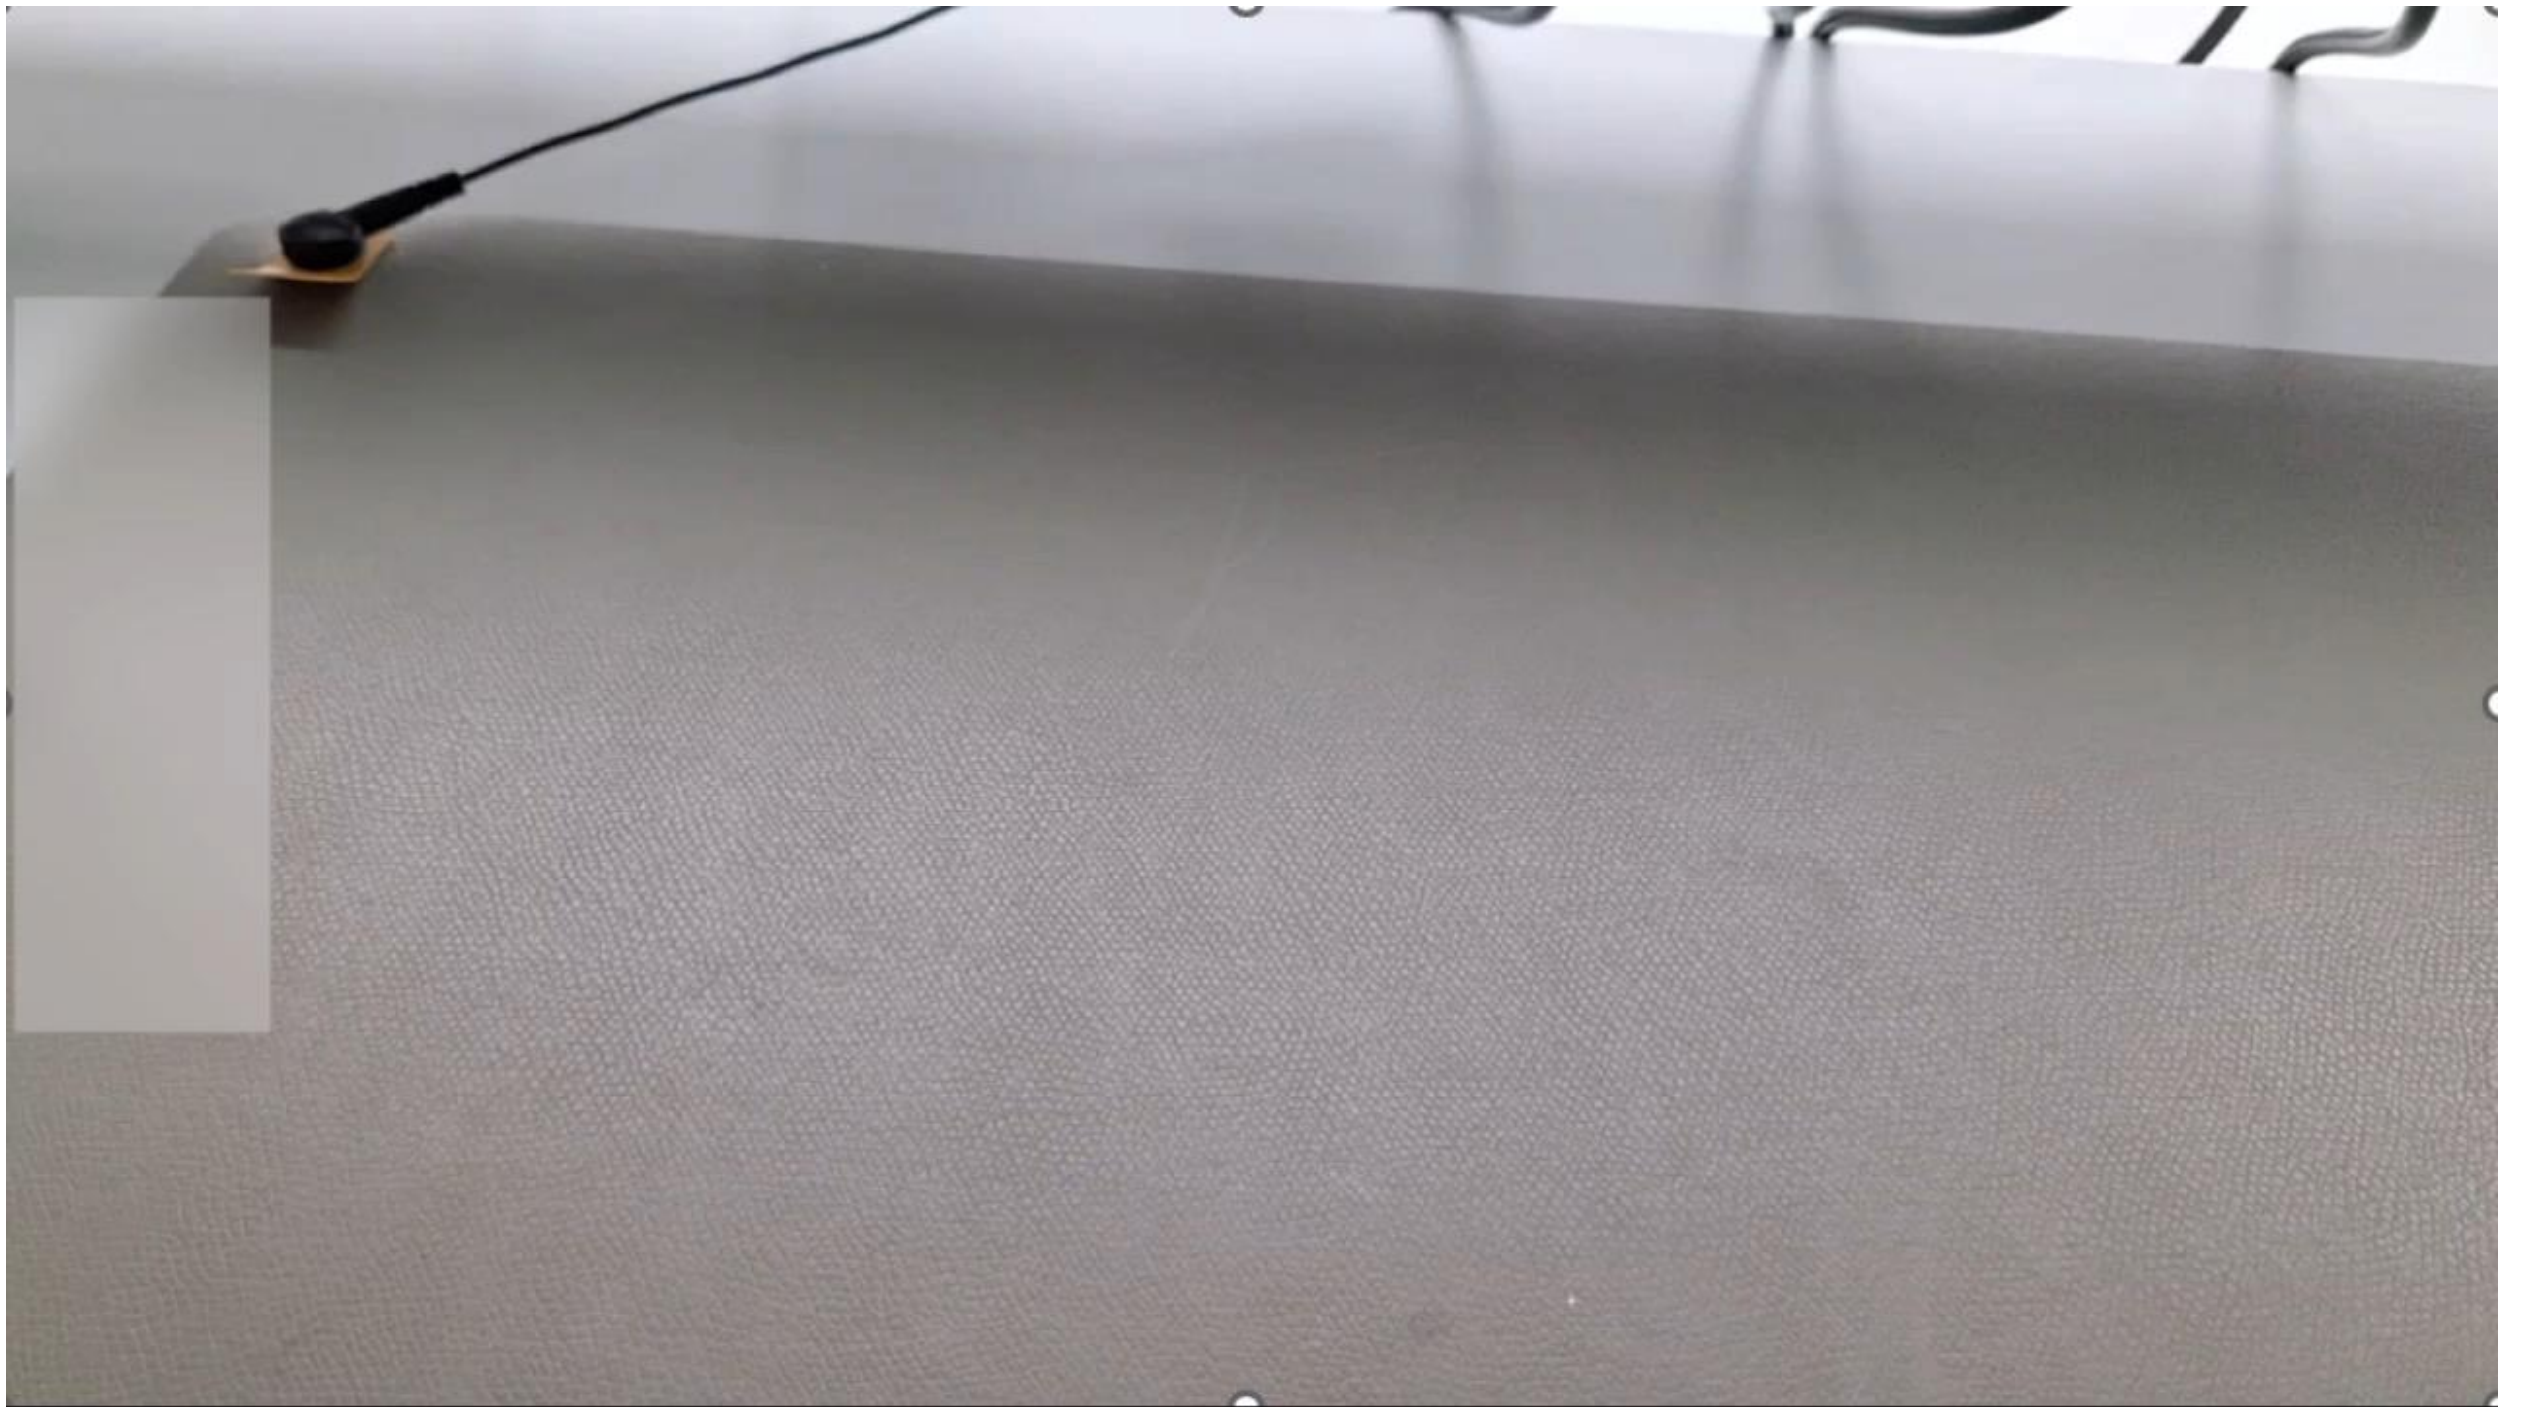

Slecht voorbeeld.

Voeding take 1

Silent

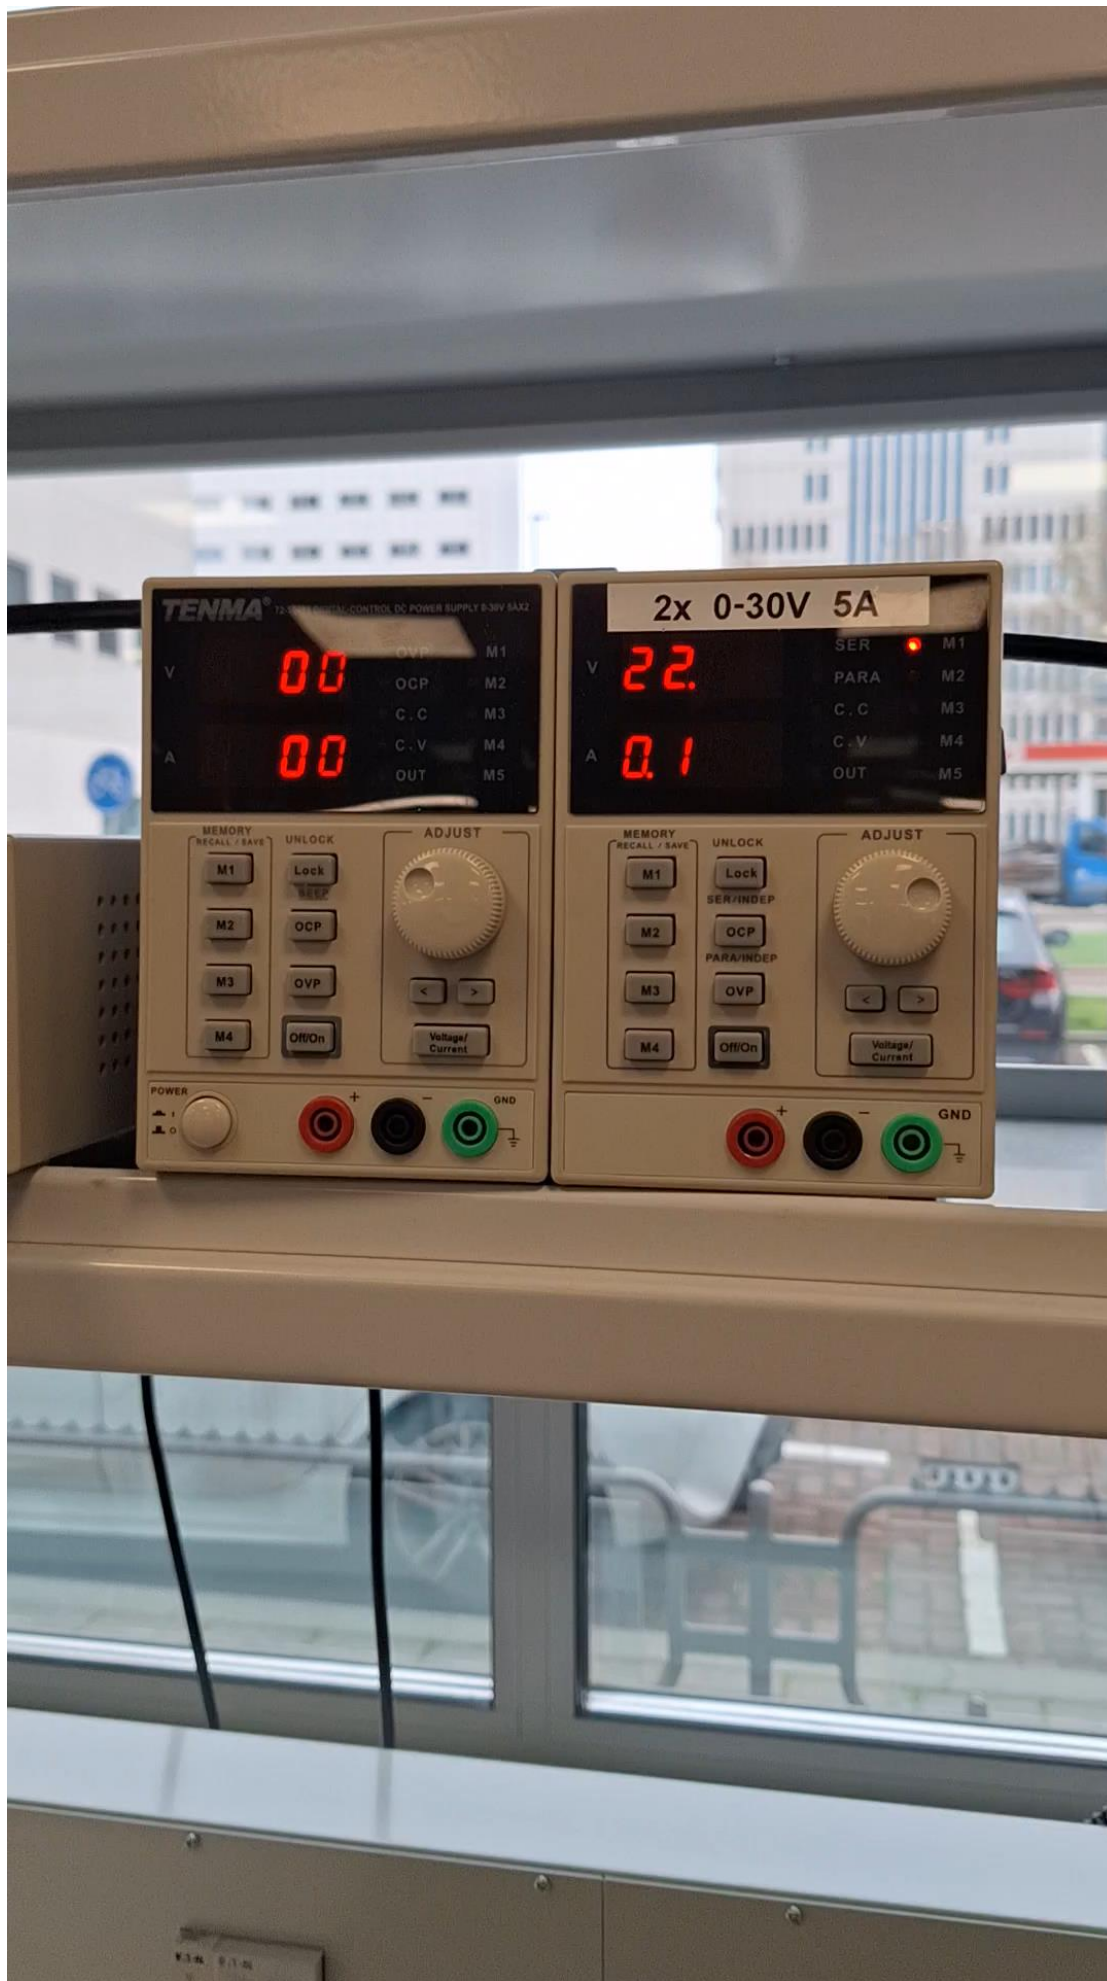

Lighting

You don't need fancy lighting. Ideally you can use daylight or indoor lighting if you need. The important thing is that the light is falling *towards* the subject. Avoid a situation where the subject is between the camera and a light source. If need be, you can also use the flashlight of a second smartphone to provide some soft lighting.

Shooting

- Generally, you want to shoot horizontally, ie landscape. If you are very sure that the video is for a vertical format (like an Instagram story) that's maybe different, but it's a lot easier to go from landscape to portrait than vice-versa.
- Don't use the digital zoom! It makes everything look pixelated. Just get close
- Give your phone lens a quick wipe before you start.
